

One role brief in. A full hiring package out.

A Claude plugin running eleven coordinated talent-acquisition agents. One research pass builds a per-role Context Pack from public data; eight document specialists write in parallel from the same pack; a deterministic renderer and a QA gate finish the job. Every number carries its receipt: Sourced Estimate Internal — no receipt, no ship.

~30 min full 8-document kit, cold, research and QA gate included (measured live)	~1 sec updates: comp change or new trigger re-rendered at zero AI cost
12 calls hard web-research budget per role, audited in the pack's provenance	0 network requests from finished documents: fully self-contained HTML

HOW IT WORKS

THE EIGHT DOCUMENTS

01 · SENSEI Role Educational Brief Teaches a non-technical recruiter the domain.	02 · JD-BOT Job Description Paste-ready posting with a why-it-is-written-this-way rail.	03 · ATLAS Talent Intelligence Map Supply, demand, geography, personas, comp.	04 · HUNTER Sourcing Playbook Boolean library, channel mix, honest pipeline math.
05 · SHAKESPEARE Outreach Campaign 8 touches, 21 days, zero recruiter cliches.	06 · INTERVIEW LAB Interview Plan Loop, competency grid, graded rubrics, debrief.	07 · CALIBRATE HM Calibration Brief Market frame, comp anchor, SLAs for the intake.	08 · SCREEN 30-Minute Screen Script Cold-runnable, timed, graded spot-checks.

THE PROMISES

GAPS, NOT FILLER A number with no receipt does not ship. Missing data is labeled missing, never invented.	YOUR WORDS ON LEGAL Eligibility gates are written by you, rendered word-for-word, never drafted by the kit.	CONNECTIONS OPTIONAL An ATS or your docs upgrade specific agents. Everything runs on public data without them.
---	---	--

Install the **.plugin** file in **Claude Code** or **Cowork** (not the regular Claude chat — chat can't run the sub-agents), then say “set up talent one.”

Setup is a 5-minute guided conversation, captured once. Then ask in plain words: “write me a JD” runs one document; “run talent one” runs all eight. Generated documents are yours; the kit stays © Onepromptman.
